

Utech 280 in Cooler Weather

Now that fall is upon us let's not forget that the temperature is also changing. As a result, the chemicals we all use will react slower than they do in the warmer months. To make sure your paint dries in cooler weather (70 degrees and under) there is an additive called U998 Accelerator that MUST BE ADDED!

As stated, this is not an option if you want the paint to dry like it does in warmer months. As recommended per the Technical Data Sheet, it requires 1 ounce of U998 per gallon of mixed paint (1/4 ounce per quart). Please **DO NOT OVERUSE THIS PRODUCT** as you will see negative results in product performance such as gloss reduction and less durability.]

Dry Times

	No Additives 70°F	1oz 998 Accelerator per gal 70°F
Dust Free	50 min	20 min
Dry to handle	12 hrs	90 min

Pot Life

Pot Life (no additives) 4 hr @ 70°F
Pot Life w/ 998 Accelerator 1 hr @ 70°F
